

ENVIRONMENTAL POLICY

Lucys Environmental Policy is currently:

- a) "To recognize environmental management as among the highest corporate priorities and as a key determinant to sustainable development; to establish policies, programs and practices for conducting operations in an environmentally sound manner."
- b) "Periodically conduct formal reviews of our activities to assure compliance with environmental regulations and internal procedures."
- c) "All operations must be conducted in a manner that safeguards health, protects the environment, and conserves valuable materials and resources."
- d) "Minimize the creation of waste and wherever possible recycle materials. Waste that can not be eliminated, reduced, reused, recycled or composted, will be disposed through safe and responsible methods."
- e) "Take measures to minimize energy and other resource consumption through increased efficiency and conservation."
- f) "To educate, train and motivate employees to conduct their activities in an environmentally responsible manner."

Lucys Environmental Strategy is:

- g) "To continue to improve corporate policies, programs, and environmental performance, taking into account technical developments, scientific understanding, consumer needs and community expectations, with legal regulations as a starting point; and to apply the same environmental criteria internationally."

We are in the process of creating environmental procedures for departments within the company that will enable us as a company to have greater awareness of all of the environmental issues necessary to gain EMAS and ISO 14001 accreditation.
